

Pivot table

Definition:

A Pivot Table is an Excel tool used to summarize and analyze large amounts of data. It helps us quickly calculate values such as Sum, Average, Count, Minimum and Maximum.

I understood that Pivot Table has different areas such as Rows, Columns, Values and Filters. We can arrange the data according to our requirement and create a summary report.

For example, from the Sales Data, I can use a Pivot Table to find the total Sales Amount for each Region or Category

The screenshot shows an Excel spreadsheet with a PivotTable and its source data. The PivotTable is located in the range D4:G12 and summarizes ticket data. The source data is in the range A4:J12.

PivotTable Data:

Row Labels	Count of Ticket ID	Average of Resolution Hours	Count of Ticket ID	Average of Satisfaction Score
Account Update	2	14	3	3.5
Login Issue	4	9	3	3.25
Payment	3	5.5	2	4.66666667
Technical Issue	3	5.5	3	2.33333333
Grand Total	12	4.66666667	12	3.46666667

Source Data (Range A4:J12):

Ticket ID	Date	Category	Priority	Assigned To	Status	Resolution Hours	Satisfaction Score
T001	01-Aug-26	Login Issue	High	Ananya	Closed	2	5
T002	02-Aug-26	Payment	Medium	Bala	Closed	5	4
T003	03-Aug-26	Technical Issue	High	Chitra	Open	0	0
T004	04-Aug-26	Login Issue	Low	Deepak	Closed	8	4
T005	05-Aug-26	Payment	High	Ananya	Closed	3	5
T006	06-Aug-26	Technical Issue	Medium	Bala	Closed	6	3
T007	07-Aug-26	Account Update	Low	Chitra	Closed	10	4
T008	08-Aug-26	Login Issue	High	Deepak	Open	0	0
T009	09-Aug-26	Payment	Medium	Ananya	Closed	4	5
T010	10-Aug-26	Technical Issue	High	Bala	Closed	2	4
T011	11-Aug-26	Account Update	Medium	Chitra	Closed	7	3
T012	12-Aug-26	Login Issue	Low	Deepak	Closed	9	4

Look up Function

Definition:

Lookup functions are used to search for a particular value in a table and return the related information.

I understood that VLOOKUP searches for a value vertically in the first column of a table and returns the required value from another column.

For example, if I have an Order ID such as ORD001, I can use VLOOKUP to find the corresponding Product, such as Laptop.

The screenshot shows an Excel spreadsheet with a sales data table and summary calculations. The table has columns for Order ID, Region, State, Product, Category, Quantity, and Sales Amount. The summary calculations are organized into four sections: Grand total, Sales Amount for each Category, Quantity each sold by sales persons, and Average sales amount for each region.

Order ID	Region	State	Product	Category	Quantity	Sales Amount
ORD001	North	Arizona	Laptop	Electronics	2	\$6000
ORD002	South	Idaho	Monitor	Electronics	10	\$5000
ORD003	East	China	Chair	Furniture	3	\$2000
ORD004	West	Oregon	Refrigerator	Electronics	5	\$7500
ORD005	South	Arizona	Study Table	Furniture	2	\$2000
ORD006	South	Idaho	Refrigerator	Electronics	4	\$6000
ORD007	East	China	Bookshelf	Furniture	2	\$3000
ORD008	West	Oregon	Monitor	Electronics	1	\$5000
ORD009	North	Arizona	Monitor	Electronics	3	\$4500
ORD010	South	Idaho	Office Chair	Furniture	5	\$3000
ORD011	East	China	Refrigerator	Electronics	7	\$9500
ORD012	West	Arizona	Study Table	Furniture	3	\$3000

Grand total		Sales Amount for each Category		Quantity each sold by sales persons		Average sales amount for each region	
Row Labels	Sum of Sales Amount	Row Labels	Sum of Sales Amount	Row Labels	Sum of Quantity	Row Labels	Average of Sales Amount
East	\$5500	Electronics	\$27000	Arizona	15	East	\$2050
North	\$3000	Furniture	\$16000	Idaho	12	North	\$4366.6667
South	\$2000	Grand Total	\$16000	China	1	South	\$4266.6667
West	\$7500			Oregon	4	West	\$186.6667
Grand Total	\$16000			Grand Total	32	Grand Total	\$4700
